

# Fiproyam 2.5%

Emulsifiable Concentrate (EC)

Category	Termicide
Composition	Each one liter contains: Fipronil 25 gm
Group	phenylpyrazol

## Mode of action:

Insecticide acts by contact and ingestion.

## Properties:

- Used for controlling termites and wood feeders, it affects them with a special way differs than the traditional pesticides mode of action, where it eliminates the termite within a few days with long lasting residual effect that destroys the entire colony with high efficiency.

## Uses and application rates:

Area	Pest	Application rate	Method of application
Treatment before construction.	Termites	1 Lt. pesticide \ 100 Lt. water	5 liters solution \ m <sup>2</sup> , spray the ground of the buildings to be constructed.
Treat infested areas			
In floors	Termites	1 Lt. pesticide \ 100 Lt. water	Use the drill to make hole with a depth of 30 - 35 cm with a diameter of 0.05 - 1 cm directly in floors where the distance between the hole and the another 40 - 50 cm, and inject 2 liters of the solution in each hole.
In walls	Termites	1 Lt. pesticide \ 100 Lt. water	Make holes in walls with height of 1.5 m, between each hole and the another 40 - 50 cm, and inject 2 liters of the solution in the hole.

## Compatibility:

Incompatible to mix with other pesticides.

## Remarks:

- Pesticide efficiency: pesticide efficiency persists to eliminate termites for a period of 5 years.
- Very toxic to aquatic organism.
- Flammable
